

**Shell:** A complete drum kit may be made up of steel, brass, or aluminum shells. The most common is the steel shell. Steel shells are made of a high-quality, low-carbon steel that is known as "drum steel." The shells are made of a single piece of steel that is formed into a shell. The shells are then finished with a clear lacquer that gives them a shiny, reflective appearance.

**The RT:** The RT is a complete drum kit that has a steel shell. It is made of a high-quality, low-carbon steel that is known as "drum steel." The shells are made of a single piece of steel that is formed into a shell. The shells are then finished with a clear lacquer that gives them a shiny, reflective appearance. The RT is a complete drum kit that has a steel shell. It is made of a high-quality, low-carbon steel that is known as "drum steel." The shells are made of a single piece of steel that is formed into a shell. The shells are then finished with a clear lacquer that gives them a shiny, reflective appearance.

**Headset:** The headset is a set of three cymbals that are made of brass. They are made of a high-quality brass that is known as "cymbal brass." The cymbals are made of a single piece of brass that is formed into a cymbal. The cymbals are then finished with a clear lacquer that gives them a shiny, reflective appearance.
